2. healthy communities
3. population health assessment
4. social determinants of health
 - **Assessment and Surveillance**
 - **Promotion, Protection, Prevention**
 - **Emergency Management**

Public Health Surveillance

Public Health Surveillance: ongoing and systematic collection, analysis and dissemination of health-related data with the goal to reduce morbidity and mortality by informing public health action

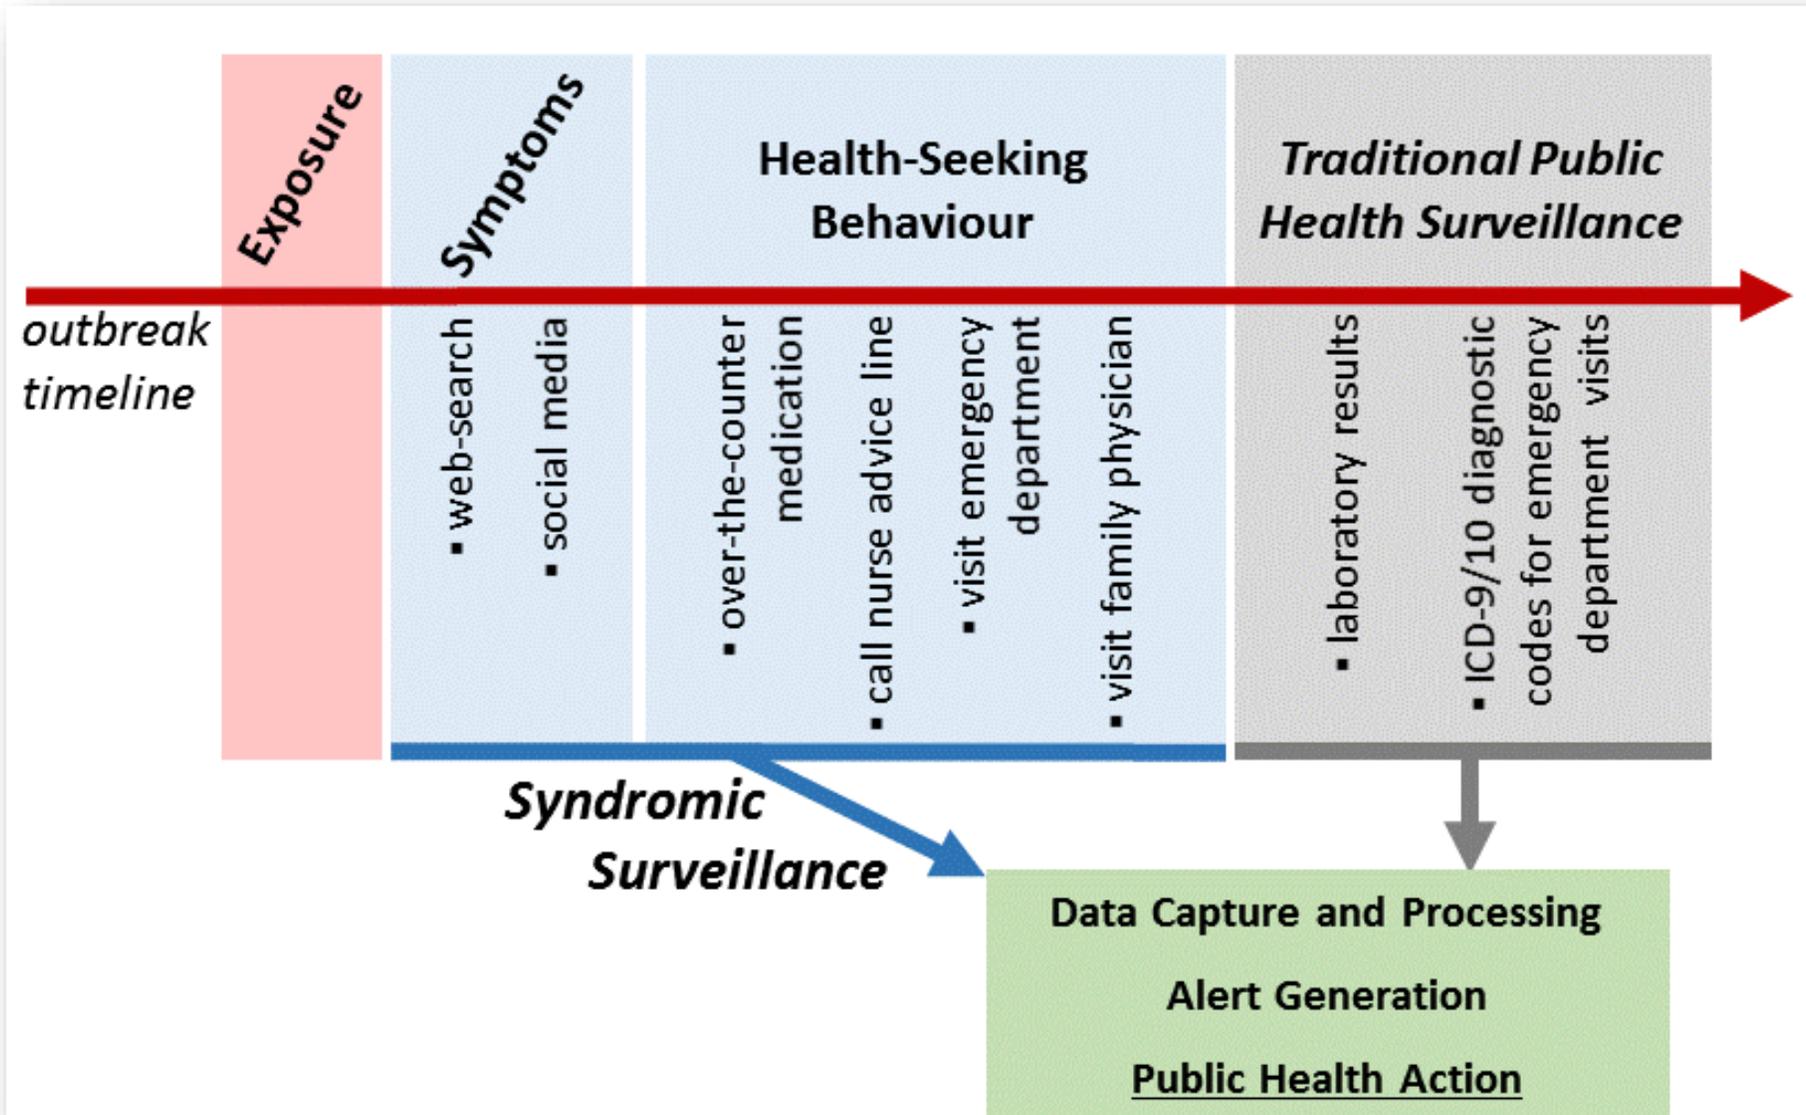

Syndromic Surveillance: surveillance that uses real (or near-real) time pre-diagnostic data and statistical tools to detect unusual health patterns or signals with the goal of **reducing the time to detect and respond** to outbreaks that will be a public health concern

Syndrome: a predefined grouping of symptoms (or health indicators) that may indicate a clinical diagnosis or specific health outcome, but **do not require** laboratory **diagnoses** for confirmation

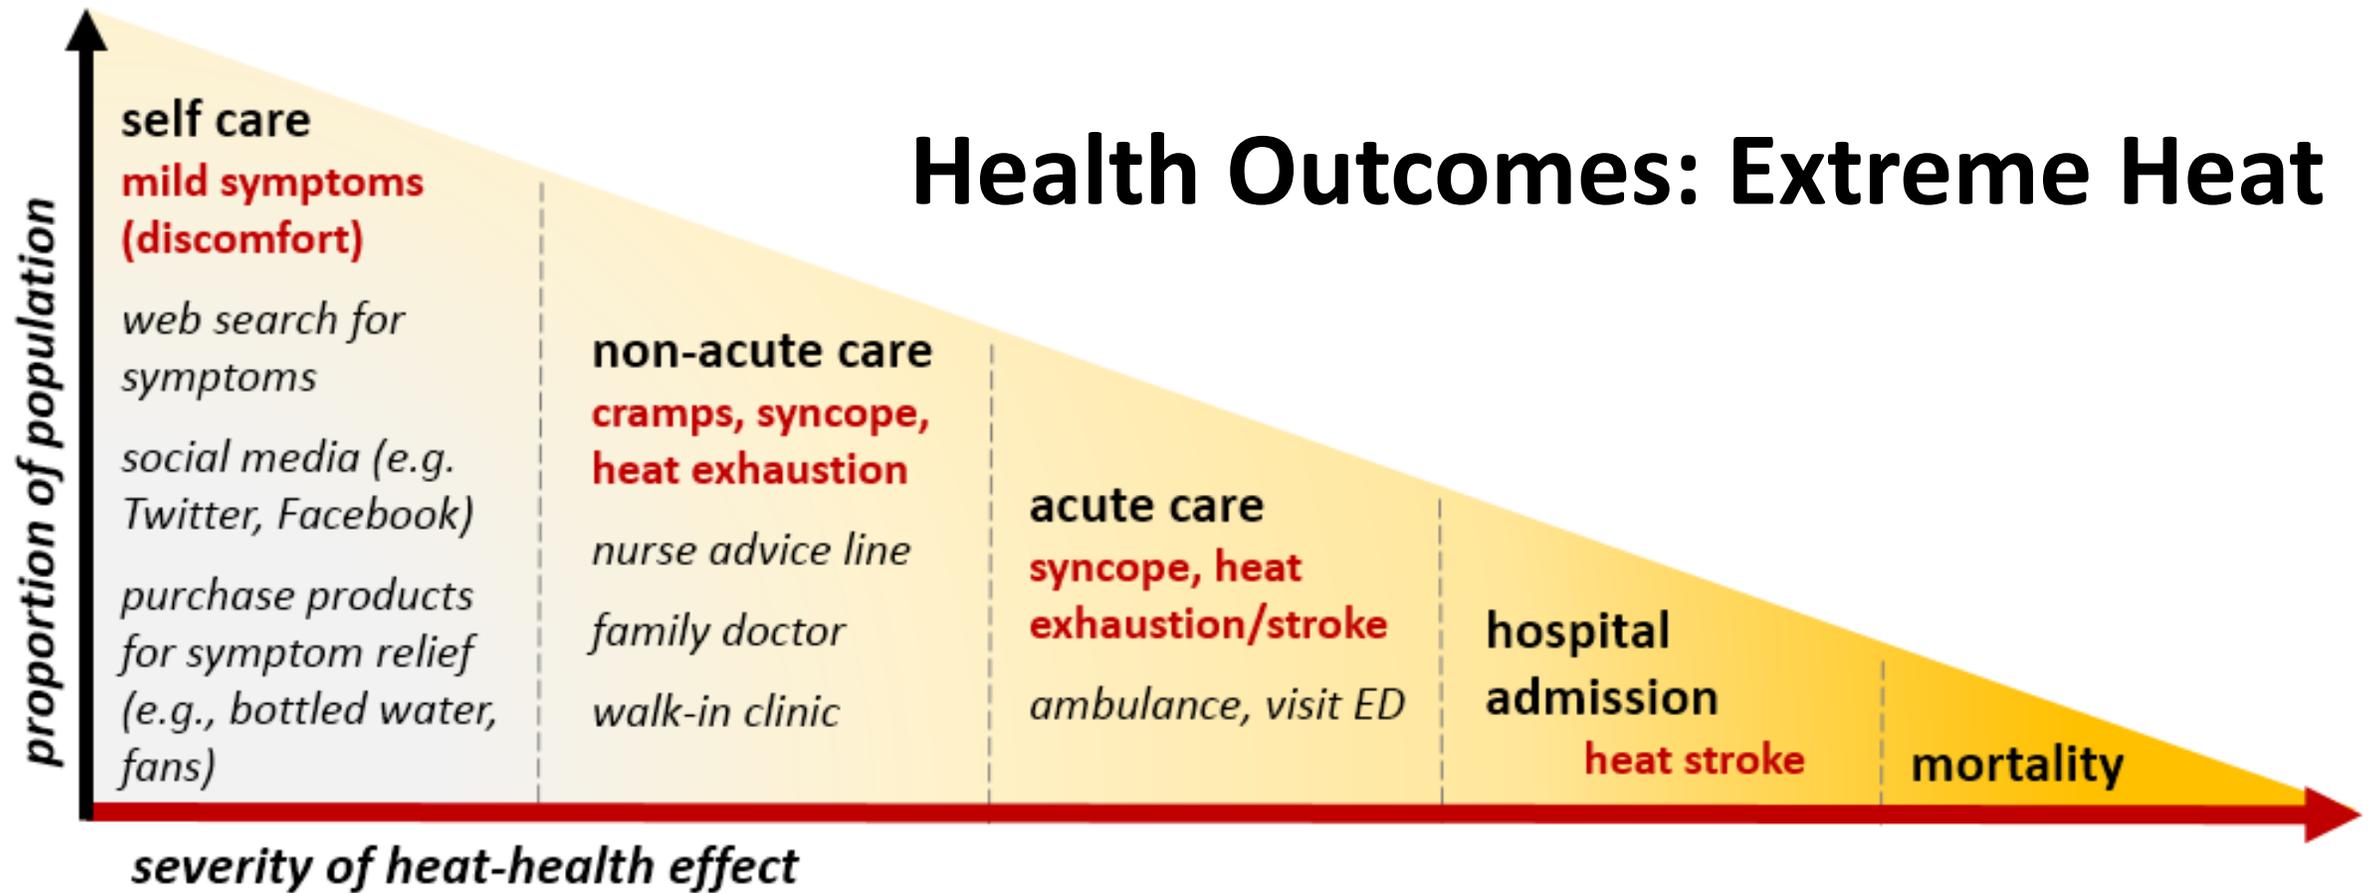

Public Health Surveillance

	Traditional Surveillance	Syndromic Surveillance
data sources	diagnostic data from case reports, laboratory reports	pre-diagnostic data (e.g., triage, drug sales, school records)
timing	days to weeks	immediate (real time) to hourly or daily (near-real time)
goal	individual cases or clusters of cases, monitor reportable diseases	excess or unusual case counts; bioterrorism; influenza; asthma
data transfer	telephone/fax transfer of records, paper files	automated electronic data transfer

Timeline of Disease Outbreak

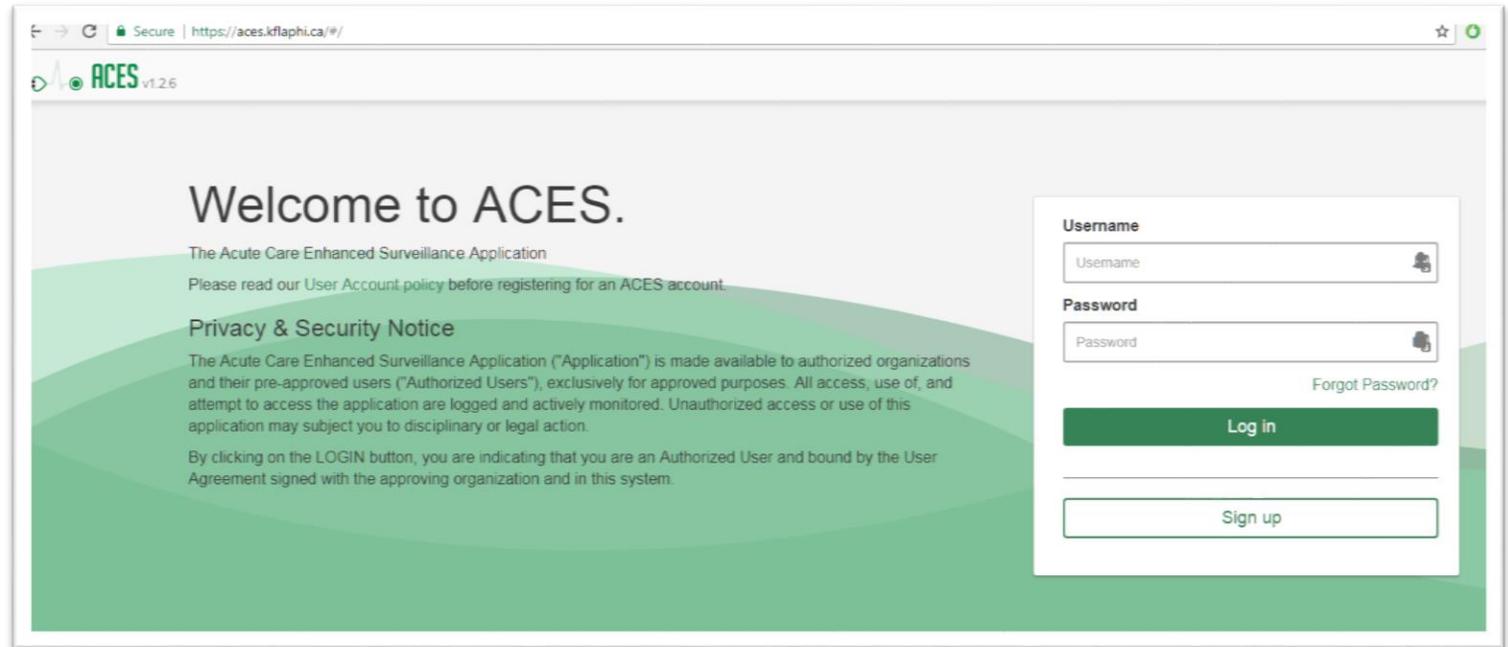

Health Outcomes: Extreme Heat

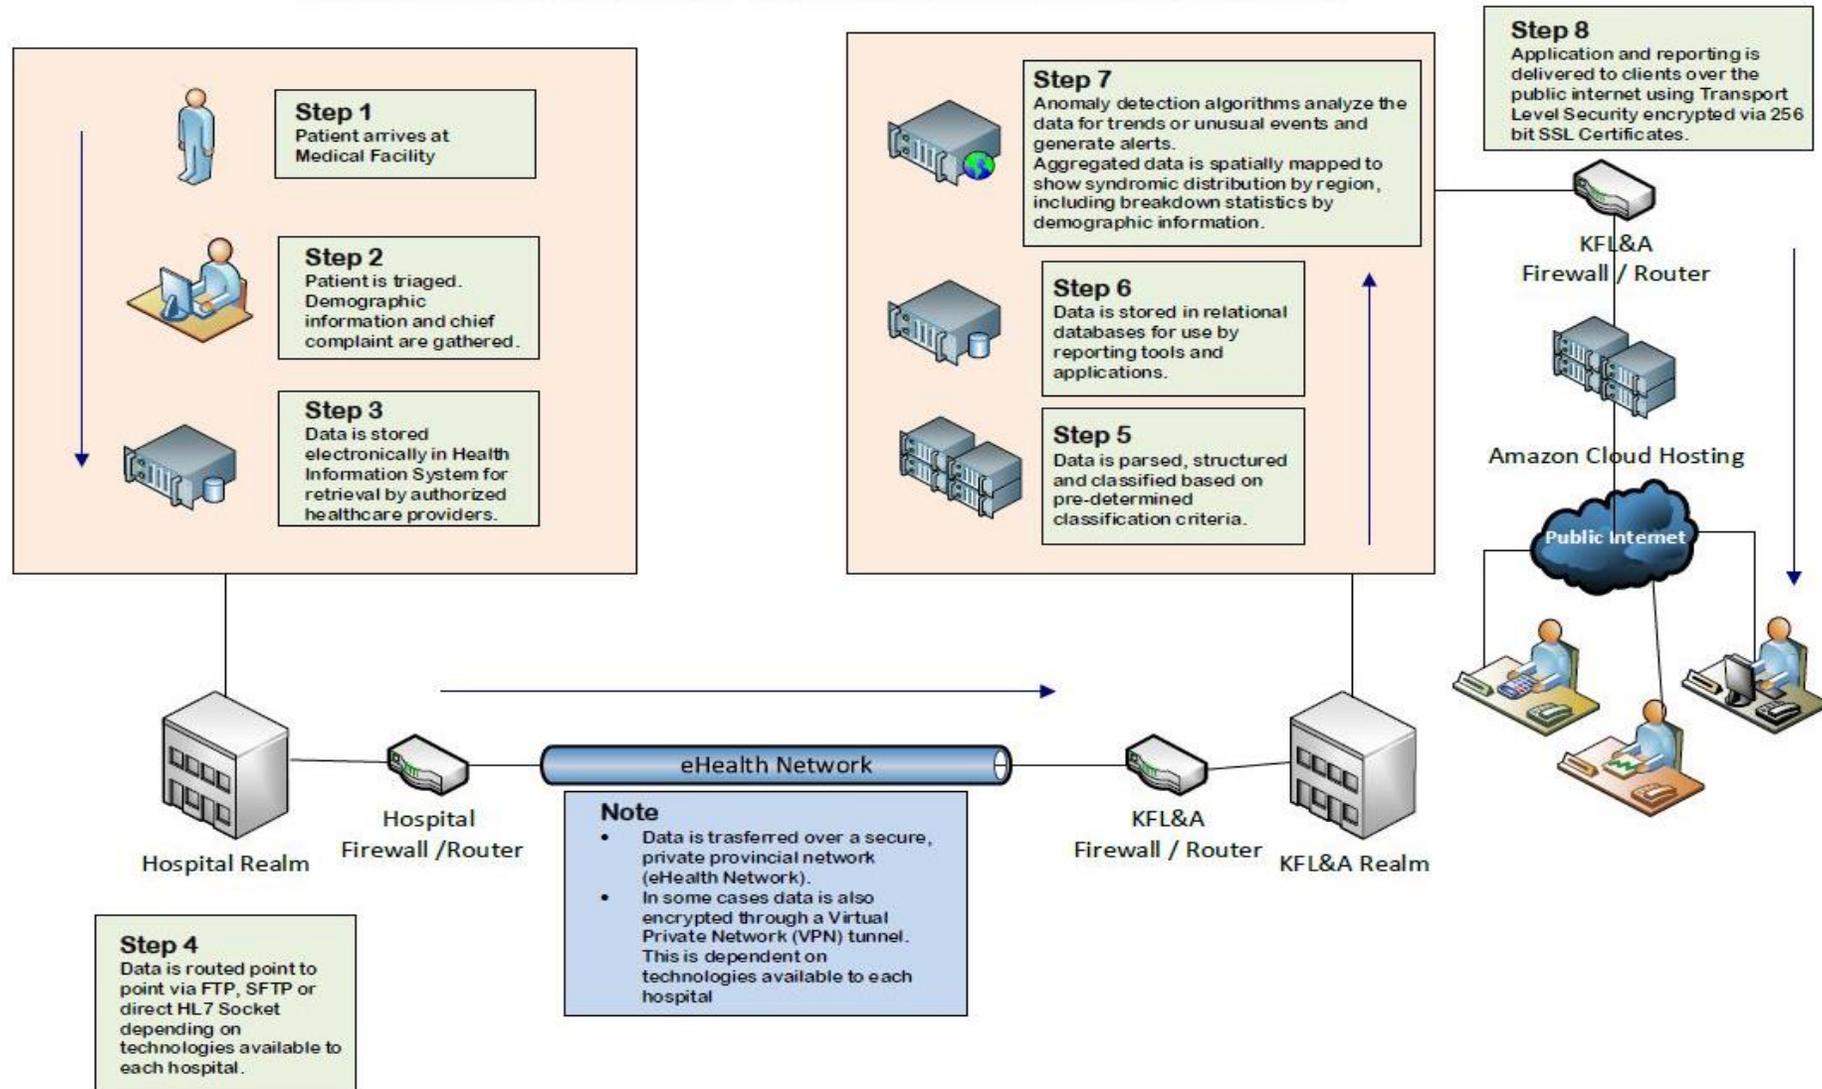

Acute Care Enhanced Surveillance (ACES)

- 161 hospitals participating in Ontario
- collection and analysis of patient data based on disease symptoms (chief complaints), *not* disease diagnosis
- monitor 18,000 ED visits and 3,000 admissions daily
- chief complaints assigned to one of 84 syndromes using natural language processing
- provides real-time surveillance with built-in analytics: volume, demographics, acuity, mapping

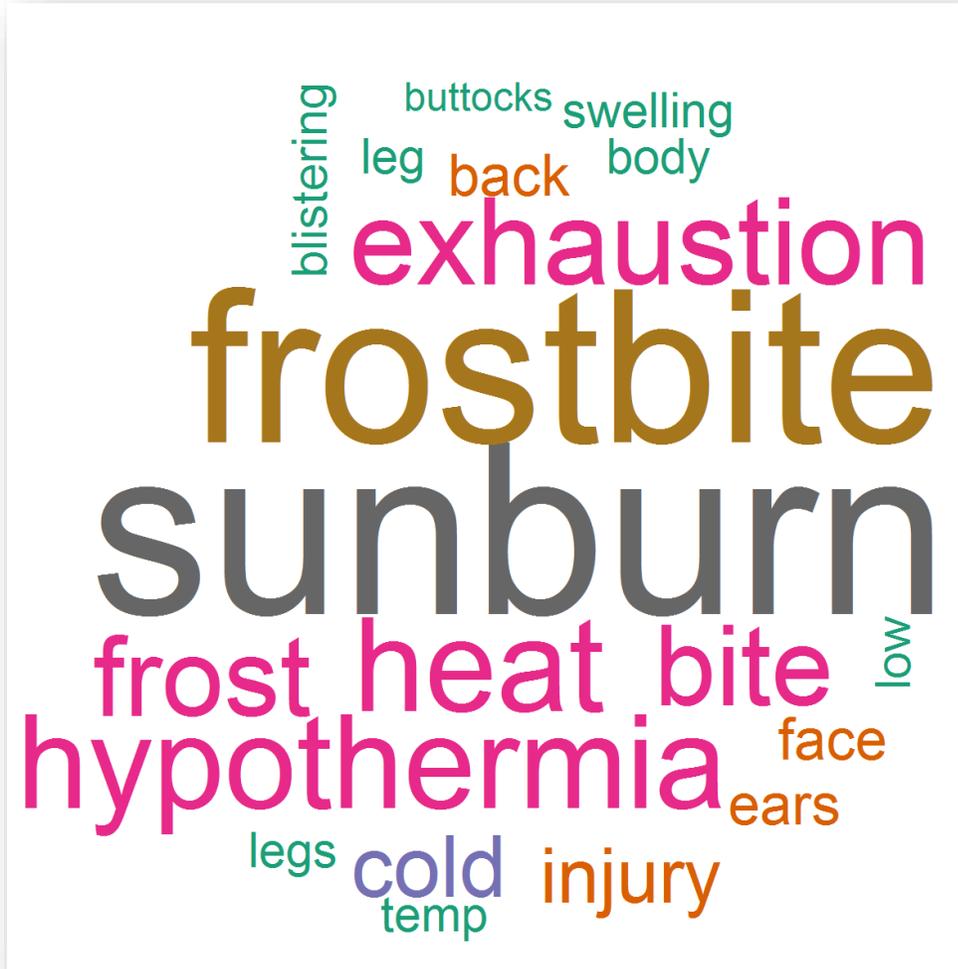

ACES Data Flow

Data Flow Cycle for Acute Care Enhanced Surveillance (ACES)

Syndrome Classification

- categorize ED visits into 80+ syndromes
- train sorting algorithms with expert-classified data sets— machine learning techniques, natural language processing
- validate classification with NACRS diagnostic data

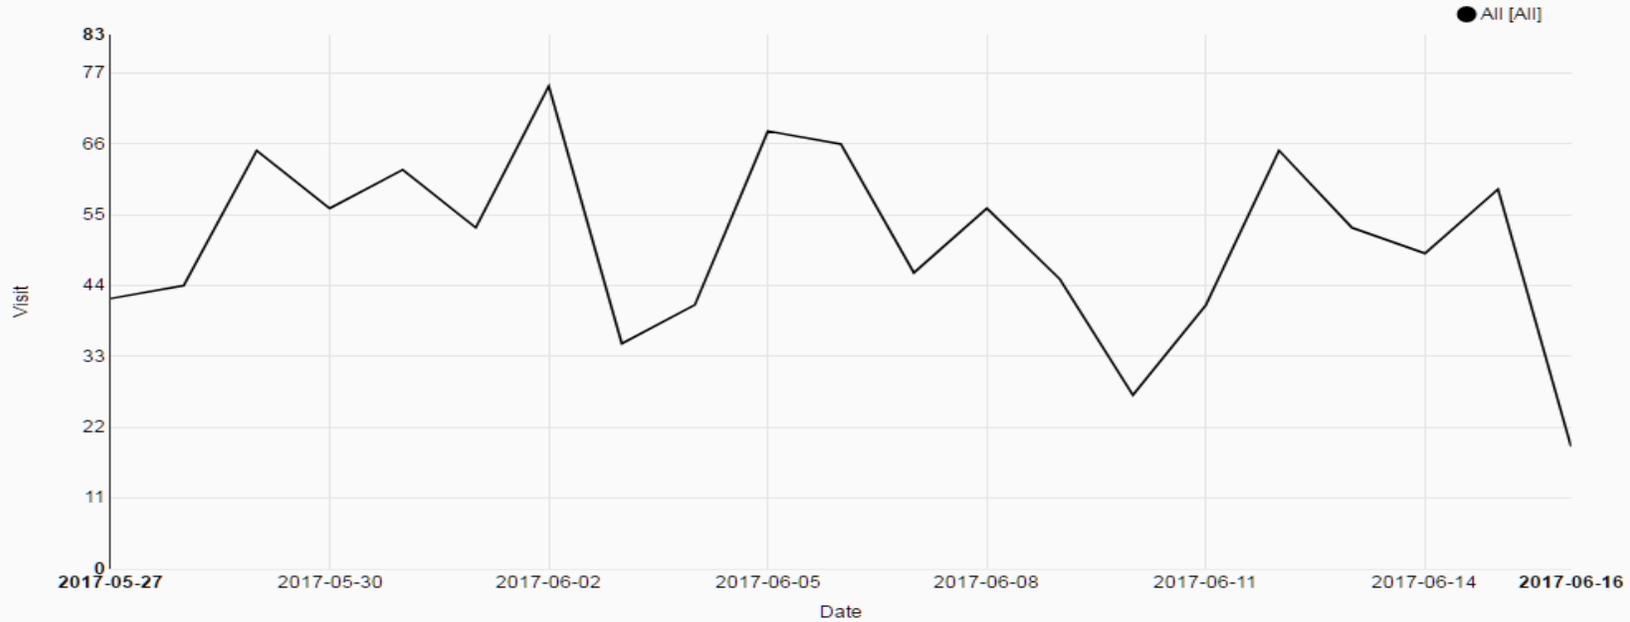

Syndromes

ACES Code	Syndrome Description
ALLERG	allergic reaction, angioedema
AST	asthma, wheeze, difficulty breathing
BITE	human, animal, bug (non-insect)
BRONCH	bronchiolitis, RSV
BURN	burns –chemical and thermal
CAD	coronary artery disease
CARD	pericarditis, effusion, myocardial infarction
CDIFF	C. difficile
CELL	cellulitis, non wound infection
CHF	congestive heart failure
CO	carbon monoxide exposure
CONC	concussion, head injury
COPD	chronic obstructive lung disease
CROUP	croup-PIV
CV	cardiovascular (exclude cardiac)
DEHY	dehydration
DENT	dental pain, infection, trauma
DERM	rash, undifferentiated, skin infection
DM	diabetes and its complications
ELECT	electrolyte imbalance, electrolyte abnormalities
ENT	related to ears nose throat
ENVIRO	heat stroke, heat syncope
EOH	alcohol and complications, liver damage
FALL	falls undifferentiated
FBI	foreign body ingestion-nose to anus
FEB	febrile neutropenia
GASTRO	gastroenteritis
GB	Guillain Barre syndrome
GI	GI bleed-upper and lower
GMED	general medical admission
GNSURG	general surgical admission
GYN	gynecological, bleed, hysterectomy
HEAD	undifferentiated headache
HEM	hematological condition
HEP	hepatitis, undifferentiated
ILI	fever, myalgia, undifferentiated
INF	non specific infections-general
INJ	sprain, strain, laceration
INS	insomnia, sleep disorder
INT	intussusception
LAC	lacerations
MEDREN	medication renewal, refills
MEDSE	medication side effect-related
MEN	meningitis and encephalitis
MH	mental health
MHS	suicidal ideation, attempted suicide
MIGR	migraine
NEC	necrotizing fasciitis, severe cellulitis
NEURO	dementia, Alzheimer's, Parkinson's
NEUS	neurosurgery-aneurysm
NEWB	newborn
OBS	related to obstetrics
ONC	oncology
OPI	opioid intoxication, addiction overdose, withdrawal
OPHTH	general ophthalmological condition
ORTHF	fracture, non hip
ORTHH	fracture of the femur or hip
ORTHO	orthopedic elective surgery, cast change or assessment
OTHER	null, missing, other
PAIN	pain, undifferentiated, non cancer, radiculopathy, back pain, sciatica
PE	pulmonary embolism, DVT, VTE
PHYSIC	physician consultation
PN	pneumonia
PO	post op infection or complication
REN	renal failure, dialysis, renal disease and its complications
REPORT	reportable diseases
RESP	respiratory infection non croup, non bronchiolitis
SEP	bacteremia, SEPSIS
SI	smoke inhalation, chemical, gases
SOC	social admission
TEST	test results, blood or diagnostic imaging, xray, US, biopsy,transfusion, tube change
THOR	thoracic, pneumothorax
TICKS	ticks
TOX	toxicology-not alcohol or opioids, withdrawal, substance abuse, chemical exposure
TRMVC	trauma from a MVC/ATV
TRO	trauma from another means, fall etc.
TRW	gunshot or stab, violence, assault
TRS	sexual assault, rape
URO	urological -stones, prostate, UTI
VOM	vomiting-alone-NORO like illness, not secondary to chemo or with other symptoms

Surveillance of Climate Change Health Impacts

Public Health Information Management System (PHIMS)

The screenshot displays the PHIMS web application interface. At the top, there is a search bar labeled "Search Address" and navigation links for "Alerts" (with a notification icon), "Bookmarks", "Layer Status", and a user profile icon. Below the search bar is a "Layers" panel on the left side, which includes a "Tools" section and a "Legend" section. The "Layers" section contains a dropdown menu for "Select preset layer theme..." and a "Search..." input field. Below this, a list of layers is shown, each with a dropdown arrow:

- Administrative Boundaries
- Air Quality
- Alerts
- Demographics
- Emergency Management
- Emergency Management (GTA)
- Health Care Facilities
- Health Outcomes
- Road and Traffic Conditions
- Storm Events
- Temperature Stress
- Urban Heat (BETA model)

The main area of the interface is a map of the Great Lakes region, showing major cities like Toronto, Montreal, and Ottawa, as well as the Great Lakes themselves. The map includes various data layers, such as administrative boundaries and health care facilities. A scale bar at the bottom indicates distances up to 100km. In the bottom right corner, there is an inset map of North America with a red box highlighting the current map's location. The text "Esri, HERE, Garm" is visible at the bottom right of the map area.

A Harmonized Heat Warning and Information System for Ontario (HWIS)

Standard Operating Practice

June 2016

Ministry of Health and Long-Term Care
Population and Public Health Division
Public Health Policy and Programs Branch

Day 1: Tuesday July 5, 2016

Emergency Simulation Slide 1

This morning at 9:00 AM you receive a heat warning for South-Central Ontario from Environment Canada.

The 7-day forecast from Environment Canada for the City of Barrie shows that temperatures are expected to stay above 30 °C and humidex values above 40°C for the rest of the week.

Forecast						
Wednesday July 6	Thursday July 7	Friday July 8	Saturday July 9	Sunday July 10	Monday July 11	Tuesday July 12
						
32°C	35°C	36°C	39°C	35°C	30°C	28°C
Feels like: 38	Feels like: 43	Feels like: 45	Feels like: 43	Feels like: 42	Feels like: 35	Feels like: 32

Day 1: Preparation

Emergency Simulation Slide 2

What action do you take in response to this heat warning and to prepare for the continuing high temperatures throughout the week?

Group 1: What is the role of local public health? Who are your partners?

Group 2: What hazards are associated with extreme heat?

What information should be monitored?

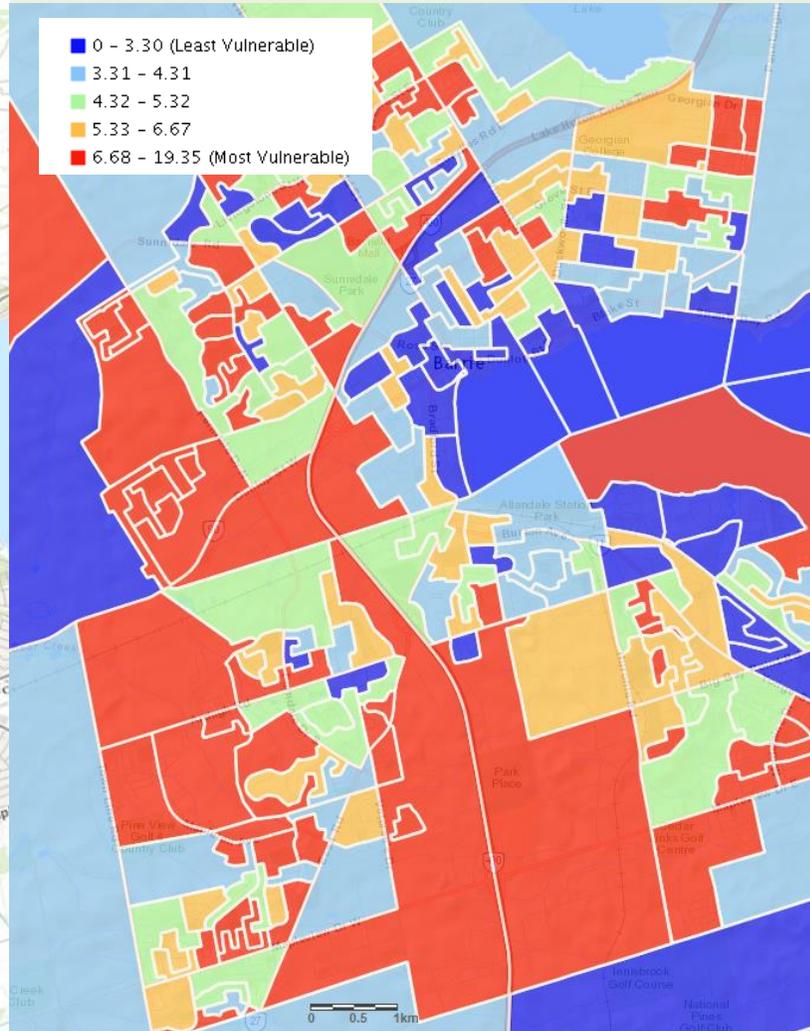

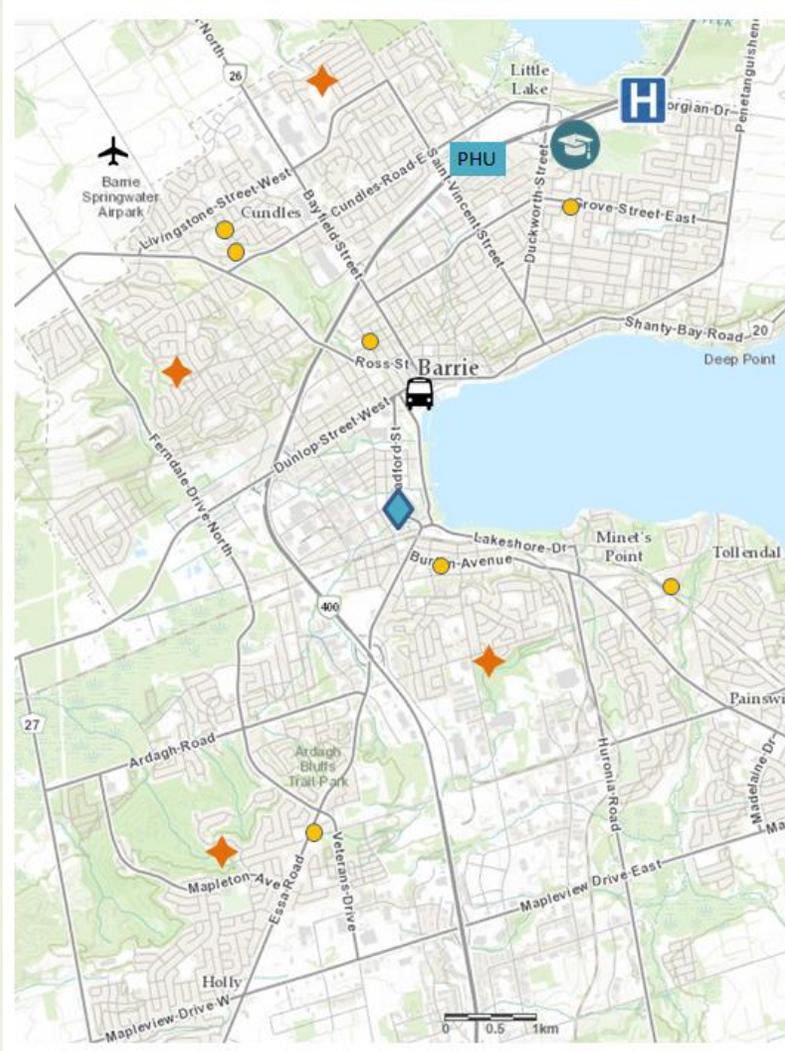

Group 3: What are the health effects of extreme heat? Who is at risk?

What information should be monitored?

Group 4: How do you communicate the heat warning?

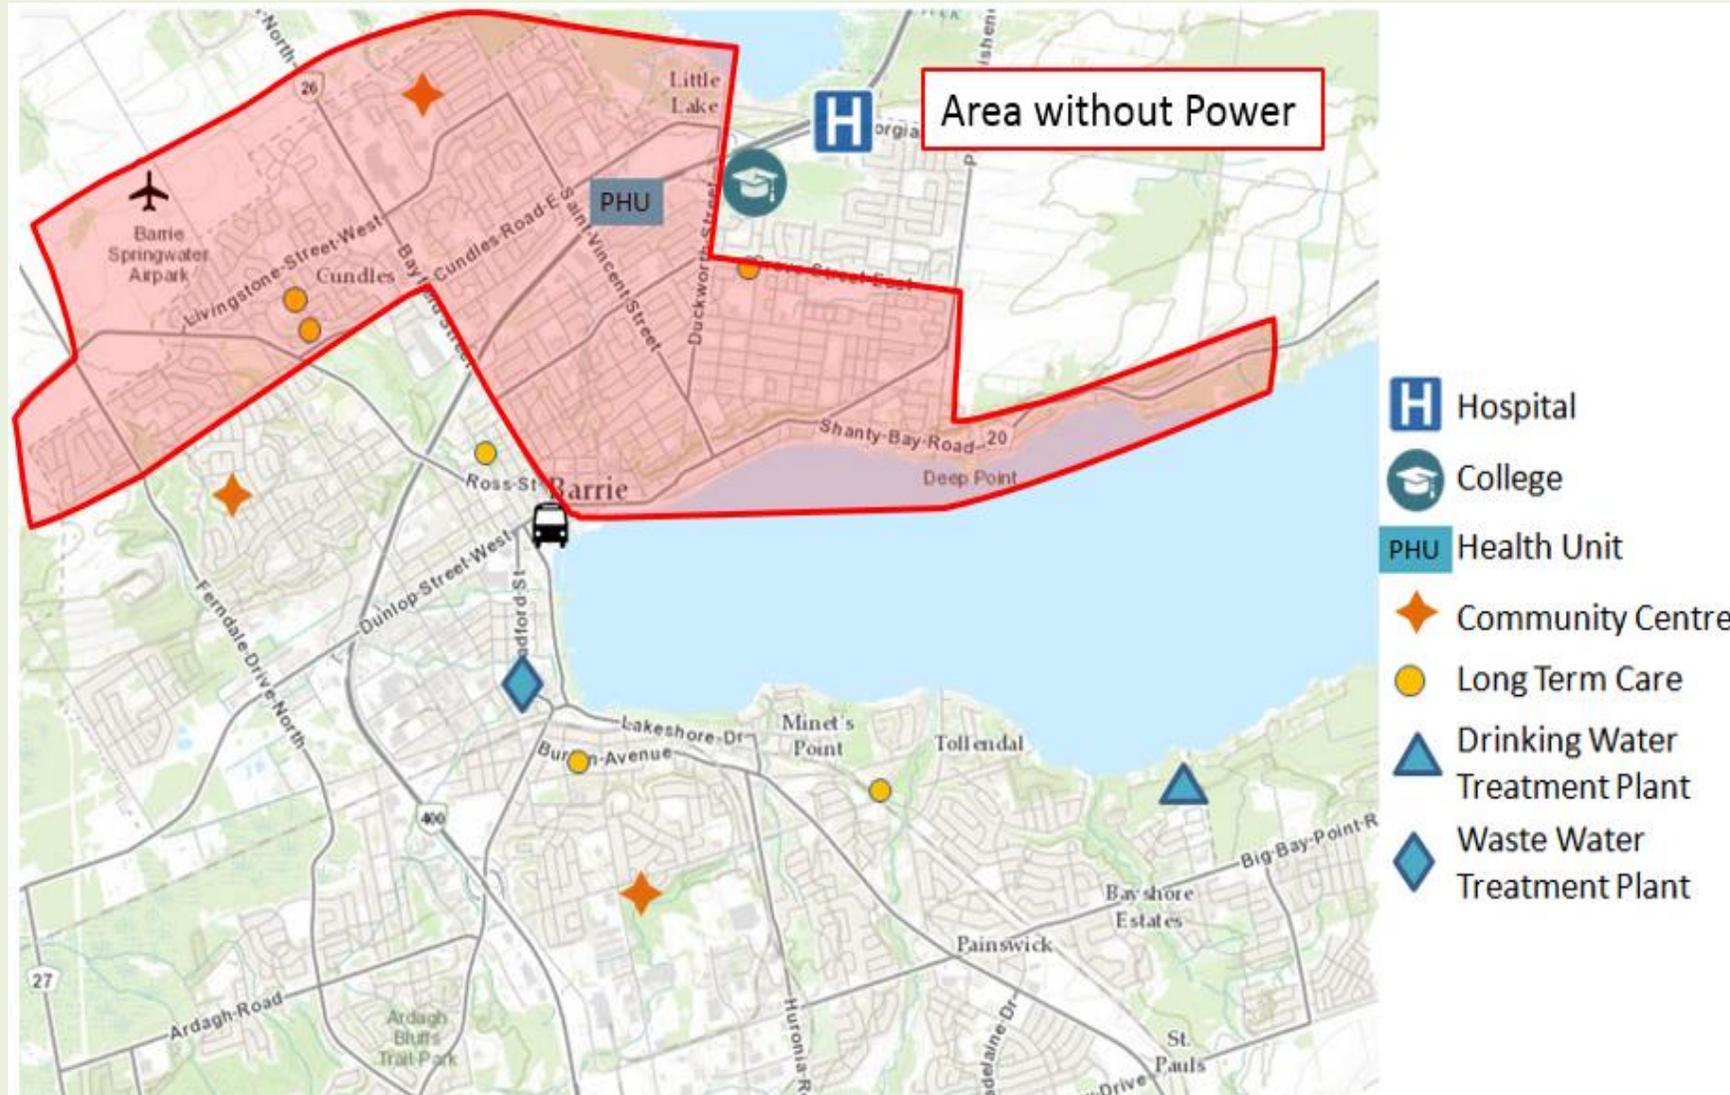

Percent of the population age 4 and under

Percent of the population age 65+

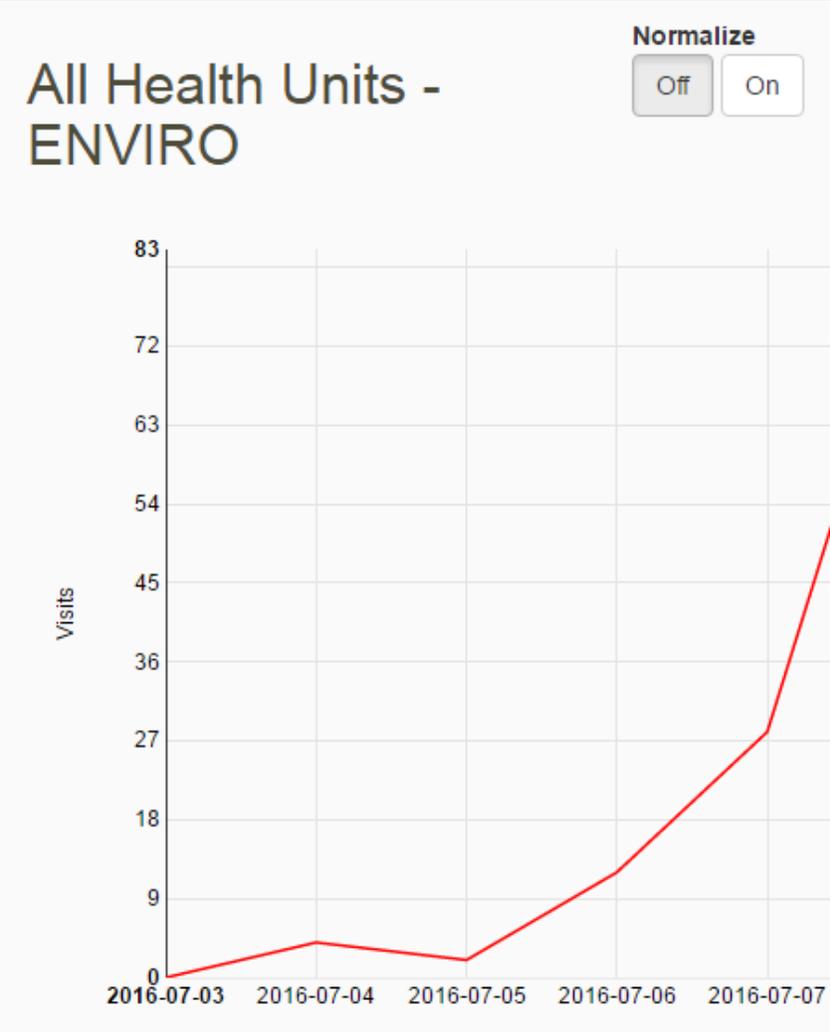

Day 4: Friday July 8, 2016

Emergency Simulation Slide 4

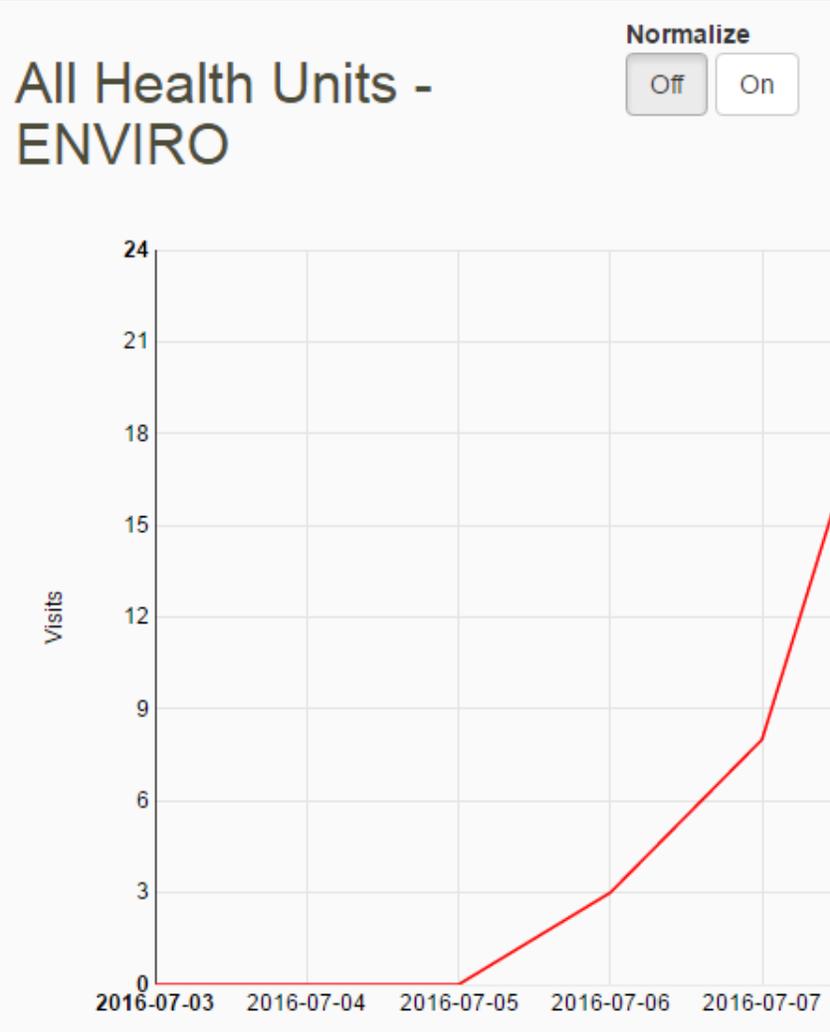

Heat related emergency room visits July 3 – July 7

Adults aged 65+

Children aged 0-4

KFL&A PH Climate Change Surveillance Initiatives

- health outcomes: **syndromic surveillance**, traditional surveillance in development
- developing products to build capacity for Ontario and beyond
- **PHIMS and ACES**
 1. real-time situational awareness
 2. emergency preparedness
